Election/Restrictions

- Restriction to one of the following inventions is required under 35 U.S.C.
 121:
 - I. Claims 1-3, drawn to gas turbine generator, classified in class 290, subclass 52.
 - II. Claims 4-7, drawn to a method of controlling an output of a gas turbine, classified in class 322, subclass 29.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention II discloses a method of controlling a gas turbine using the onset of a power grid under-frequency condition and varying the vanes based on a predetermined under-frequency vane position during the power grid under-frequency condition. Moreover, it is not necessary for invention II to accomplish the change in angular position, partially based on a transition in *turbine operation*

Art Unit: 2834

as required by invention I, but on a transition in operation from the nominal vane positioning schedule to the predetermined under-frequency condition. Also, the gradual change in angular position of the vanes is not required to change linearly, for invention I, with respect to a change in a compressor physical speed Nphys as required by invention II as disclosed in claim 6 and in claim 7. The subcombination has separate utility such as disclosed in invention I may be controlled by other factors different than an under-frequency. It may be controlled by comparing the output threshold power to a predetermined power or it may be controlled by the rpm of the rotating shaft, a closed-loop feedback, etc.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper and because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Application/Control Number: 09/893,608

Art Unit: 2834

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julio C. Gonzalez whose telephone number is (703) 305-1563. The examiner can normally be reached on M-F (8AM-5PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nestor Ramirez can be reached on (703) 308-1371. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7722 for regular communications and (703) 305-1341 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
